FOREWORD

Electrotherapy Simplified written by Sri Basanta Kumar Nanda can be taken as a textbook for the undergraduates and the diploma students of physiotherapy. Dr Nanda has tried to make the chapters very comprehensive focusing on existing theory and practice. The current evidences have taken a good place in this book.

The basic electricity and electromagnetism, on which the electrical modalities are based have been well explained. The mechanism of action of the different electrotherapeutic modalities is well explained in the chapters. The author has also given simple examples under therapeutic uses of the different modalities which even a fresher can understand. The book is a much needed response to the absence of a textbook that takes care of the student needs from top to bottom.

In my opinion, *Electrotherapy Simplified* has kept its name in right way as the author has devoted enough time to make the contents as easy as possible with suitable diagrams. This book will help the teachers as well as the pupils for their study and reference.

SS Rau

Asst. Prof. and HOD (PT) NIOH, BON-Hooghly BT Road, Kolkatta

FOREWORD

Electrotherapy Simplified written by Sri Basanta Kumar Nanda can be taken as a textbook for the bachelor students and also for those appearing for PG examinations. Dr Nanda has tried to make the chapters very comprehensive focusing on existing theory and practice with adequate current evidences at the right place.

The explanation of basic electricity and electromagnetism are praise-worthy. The mechanism of action of the different electrotherapeutic modalities is well explained in the chapters. The author has also taken painstaking efforts in giving simple diagrams wherever necessary along with suitable examples under therapeutic uses of the different modalities.

Let the book be a stepping stone of success for the readers.

PP Mohanty

Borus:

Asst. Prof. and HOD Dept. of Physiotherapy SVNIRTAR, Olatpur

Preface

Electrotherapy is one of the important aspects among the various approaches of patient management available to a physiotherapist. The use of electrical modalities in patient management has a very old history. In the industrialized world, the number of people with physical problems is increasing day-by-day, necessitating more and more advanced knowledge in the management of the physical ailments.

Electrotherapy Simplified has tried to give a comprehensive knowledge on electrotherapy and actinotherapy, starting from basic electricity and magnetism to the theoretical and clinical aspects of the different modalities applied by physiotherapists. About 200 objective question answers have been included which will enable the student to get a gist on the subject and prepare for the university degree/diploma examinations as well as PG entrance tests.

The syllabi of different universities, such as Utkal University, Bhubaneswar; Devi Ahalya Viswavidyalaya, Indore; Calcutta University, Kolkata; Dr MGR University, Chennai, etc. conducting BPT courses have been taken into consideration while preparing the text.

I hope my efforts will give significant benefit to the students.

Basanta Kumar Nanda

ACKNOWLEDGEMENTS

I sincerely acknowledge my Director, Dr BM Pradhan, Deputy Director (Technical), Dr SK Das who have been giving me continuous inspirations to work more and more. My sincere thank goes to my Head of Department, Mr PP Mohanty and Mr KN Kittur, Information and Documentation Officer for providing me all the helps, as and when needed. My sincere thanks also goes to Mr SS Rau who has taken pain to review the book. I sincerely thank to all my friends who have provided me support in preparing the text.

CONTENTS

1. Introduction

1.	Introduction	1
	Introduction to electrotherapy, Basic guidelines for the application of electrotherapy.	
2.	Electrical Fundamentals Structure and properties of matter, Static and current electricity, Potential and capacitance, Dielectric constant Capacitor (construction, types, charging and dischargin Nature of electric current, Ohm's law, Wiring of resistances, Joule's law of heating.	
3.	Magnetic Energy Magnet (types and properties), magnetic lines of force, magnetic induction, electromagnetism, Biot Savart's law Oerstead's experiments, Maxwell's cork and screw rule, Right hand thumb rule, Electromagnetic induction, Faraday's experiments, Faraday's laws of EMI, Lenz's law, Fleming's right hand rule, Eddy currents, Transformers, Choke coil.	28 v,
4.	Valves, Transistors and Rectifiers Valves (diode, triode), Semiconductor, Transistors, Rectifiers, Rectification, Smoothing circuit.	50
5.	EMS and Distribution of Electricity Measurement of current intensity, EMS (Wheatstone bridge, potentiometer, voltmeter, ammeter), Mains supply (distribution, wiring).	67
6.	Electrical Safety and Electric Shock Electrical safety, Safety devices (power plug, fuses, switches), Electric shock and its treatment.	81

Wavelength, Velocity, Frequency, Reflection, Refraction, Absorption (law of Grotthus, cosine law, inverse square

92

7. Laws Governing Radiation

law).

8.	Therapeutic Currents General outline of therapeutic currents (low, medium high frequency currents).	98 and
9.	Electrophysiology of Nerve Transmission and Muscle Contraction Physiology of muscle fibers and neurones, Neuro- muscular synapse, Types of nerve fibers, Nerve transmission, Action potential, Refractory period, Nerve accommodation, Electrical stimulation of nerves Electrophysiology of the CNS.	107
10.	Low Frequency Currents Faradic type current, Galvanic type current, Iontophoresis, TENS, Pain modulation, HVPGS, Sinusoidal current, Diadynamic currents.	121
11.	Electrodiagnosis Introduction to electrodiagnosis, Methods of electrodiagnosis (S-D curve, rheobase, chronaxie, pulse ratio) Nerve conduction tests, H-reflex, F-wave, Faradic-IDC test, Galvanic tetanus ratio, Electromyography.	
12.	Biofeedback Definition, Basic components of biofeedback process, Principles and uses of biofeedback.	246
13.	Medium Frequency Currents Interferential current, Combination therapy, Russian currents.	253

525

14. Heat and Cold Heat and cold therapy, PWB, Hydrocollator packs, Contrast bath, Fluidotherapy, Whirlpool bath, Heating pads, Cryotherapy.	26 9
15. High Frequency Currents (SWD, MWD and Ultrasound) Properties of high frequency currents, SWD, PSWD, MWD, Ultrasound, Phonophoresis.	306
16. Infrared Radiation Sources of infrared radiation, Production of infrared (luminous and non-luminous generators), Effects of I	420 R.
17. Low Intensity Laser Therapy Definition and nomenclature, Physics of laser, Production and classification of laser, Effects of laser.	431
18. Ultraviolet Radiation Classification of UVR, Production of UVR (mercury vapour lamps, fluorescent tubes), Theraktin tunnel, PUVA apparatus, Effects of UVR.	452
19. Traction Types of traction, Mechanism of action of traction, Application techniques, Lumbar and cervical traction.	482
20. Objective Type Questions	492
